

**Drug Enforcement Administration  
Drug Theft Database**

**Both Law Enforcement and the Federal Sentencing Guidelines have developed a term "STANDARD DOSAGE UNIT" as a tool for comparison purposes. The Drug Enforcement Administration's Agents Manual (Appendix E) lists a "standard dosage unit" of Methadone as 10 milligrams (mg). All calculations contained in this report have been subjected to the uniformity of equating a dosage unit to 10mg.**

**Deviations which may look as "spikes " in the data have been explored and have been explained with a singular theft event of large amounts of drug rather than an increased number of thefts.**
